## QUARTERLY ACTIVITIES REPORT FOR THE PERIOD ENDED 31 MARCH 2024

During the quarter, Oakajee Corporation Ltd ("Oakajee", "OKJ" or "the Company") continued with the regional exploration of its Paynes Find project in Western Australia.

Figure 1: Paynes Find project location.

#### Paynes Find Project - Western Australia

Following a review of gold exploration previously undertaken in the southern part of the Paynes Find project, a program of air-core (AC) drilling was completed in November 2023 targeting interpreted gold zones under shallow alluvial cover. A total of 23 drill holes for 920 metres were completed on two traverses (Figure 2). Composite 4 metre samples were collected throughout the drill holes and submitted to a commercial laboratory for gold and pathfinder element analysis.

Drill-hole locations coloured by gold results are shown in Figure 2 and the highest results are in Table 2.

All of the highest gold results occur in the lower saprolite part of weathered gabbro just above fresh rock and are associated with anomalous pathfinder elements including arsenic, bismuth, copper and tungsten. The results are interpreted as a weathering dispersion halo from a nearby but not yet intersected bedrock source. The current drill spacing of 50m along 200m spaced lines is considered too wide to intersect the expected narrow quartz vein targets and further infill drilling on a 25m x 50m and 100m line spacing will be considered.
