Company Announcements Office  
ASX Limited

## **DRILLING COMMENCES AT PAYNES FIND GOLD PROJECT**

Oakajee Corporation Ltd (“**Oakajee**” or “**the Company**”) is pleased to advise that Aircore (AC) drilling has commenced at the Paynes Find Gold Project in Western Australia. The current program will see up to 1,200 metres of drilling to follow up on Oakajee’s successful maiden drilling campaign that was undertaken in February 2020. The new program will test possible strike extensions and infill drilling will more accurately test specific structural trends.

The AC drilling program is expected to take approximately one week to complete.

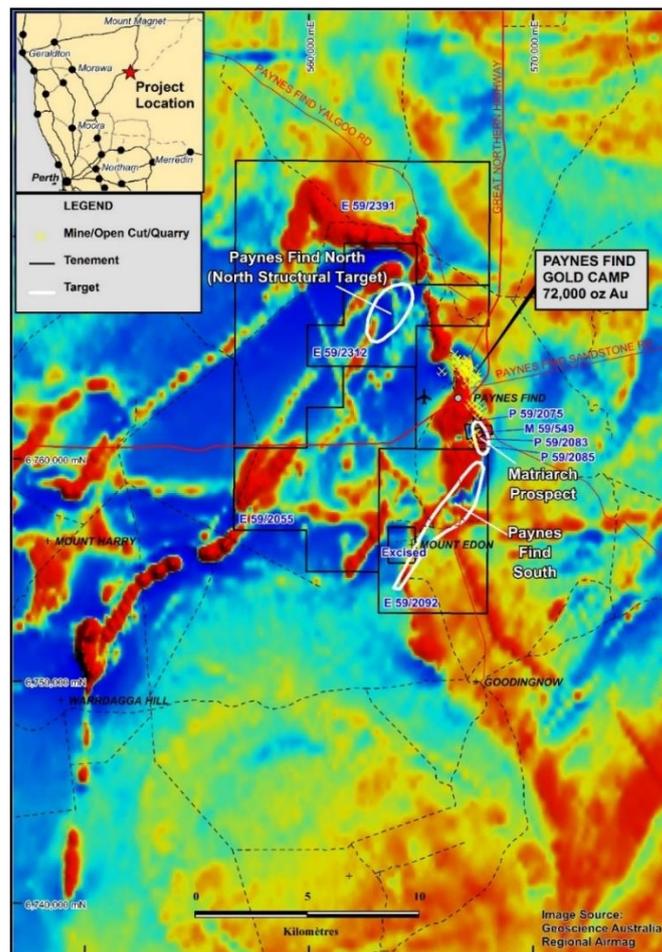

Figure 1 - Paynes Find Gold Project location

The maiden campaign completed earlier this year saw a total of 54 AC holes drilled on 5 variably spaced lines for 2,064 metres, within and around the Matriarch gold prospect. Strongly anomalous gold was intersected in 11 of the holes associated with a north-north-east striking, 1,600m long aeromagnetic low, under shallow laterite cover immediately south of the historical Paynes Find Gold Camp. Refer to the ASX announcement dated 30 March 2020 for further details.

A 25 hole, 1,200m AC drilling program is planned to both infill the current drilling pattern and to test along strike (see figure 2). The aim is to test for steeply west dipping high grade quartz vein hosted gold mineralisation similar to the Paynes Find Gold Camp located immediately north of the planned drilling. The previous wide spaced drilling intersected anomalous gold and associated pathfinder elements in weathered (saprolite) bedrock that is interpreted as a halo to potential high-grade gold zones.

## **About The Paynes Find Gold Project**

The Paynes Find Gold Project is located adjacent to the Paynes Find settlement, approximately 455km by road northeast of Perth. The land holding represents the second largest exploration project area within the Paynes Find Greenstone Belt which has produced more than 72,000oz of gold.

The Paynes Find Gold Project covers mostly greenstone sequences along strike and to the west of the Paynes Find Gold camp. Whilst the Paynes Find Gold Project has been explored since the 1970's, little effective testing of the greenstone sequences has been undertaken due to fragmented tenement holdings and alluvial cover limiting the effectiveness of conventional surface sampling.

This ASX announcement has been authorised for release by the Board.

## **COMPLIANCE STATEMENT**

*The information in this report that relates to Exploration Results is based on information compiled by Mr. Reginald Beaton who is a Member of the Australian Institute of Geoscientists. Mr. Beaton is an employee of Oakajee Corporation Limited and has sufficient experience which is relevant to the style of mineralisation under consideration to qualify as a Competent Person as defined in the 2012 Edition of the 'Australian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr. Beaton consents to the inclusion in the report of the matters based on the information compiled by him, in the form and context in which it appears. All technical information in this report has previously been released to ASX, see – "Strong Mineralised Zones Defined at Paynes Find" dated 30 March 2020. The Company is not aware of any new information or data that materially affects the information included in the above.*
